LOCKERBY ALUMNI REFLECTIONS

After graduating from Lockerby, I can say without a doubt any student who is in the STEP program will be ready for their post-secondary experience. I realised the first week that Lockerby's STEP program prepared me more than most people around me in university. After coming from Lockerby, I knew all the equipment and time management skills needed to perform Chemistry and Physics labs quickly and accurately. Learning to become proficient with AutoCAD and understanding design proposals helped tremendously when getting reports done for large group projects. I have more than once referred to my old Calculus and Chemistry notes after realising my teachers at Lockerby did a notably better job of teaching than my professors do. I am glad I went to Lockerby. The teachers and the STEP program helped create a solid base for my post-secondary education.
