

Alumni Spotlight

I graduated from Lockerby in 2011 from the STEP program. I played my final year of hockey for the school. I scored top of my class in the engineering diploma program at St. Francis Xavier University. I now work as an automation engineering intern at BESTECH, designing control systems, programming computers and designing and programming robots. I am a member of the American Society of Mechanical Engineers (ASME) and the American Institute of Aeronautics and Astronautics (AIAA). I attribute a lot of my success to my education at Lockerby. Lockerby provided me with a life-long passion for learning in the fields of science and mathematics and technology. Lockerby's Tech Design classes gave me a head-start in my first year of university by exposing me early to machining, wood-working, drafting, electrical wiring, electronics, and transportation technologies.
