## THE 2020 LEVANIES CEREMONY

Ms. Levan's Grade 9 English students decked themselves in sequins and ties to celebrate the Levanies, an awards ceremony dedicated to excellence in film! They were celebrating the completion of their 60-second Shakespeare assignment, in which they had to retell Romeo and Juliet in 60 seconds or less. Best Picture went to Adam S. for his stop-motion LEGO masterpiece! Best Cinematography went to Mary T., Brianna L., Charli H., and Abby M. for their excellent use of camera angles, distances and movements. Best Actor went to James B., who was unafraid of wearing gold Lamé to enhance his character. Great work, everyone!

## NEW TECH/OLD TECH

Taking in full advantage of new technologies, Teagan methodically created the design for her woodworking project, this week. Her plans will come to fruition using the more traditional tools and materials in the woodshop.

What a great combination of technologies!

## MEDICAL BIOLOGY

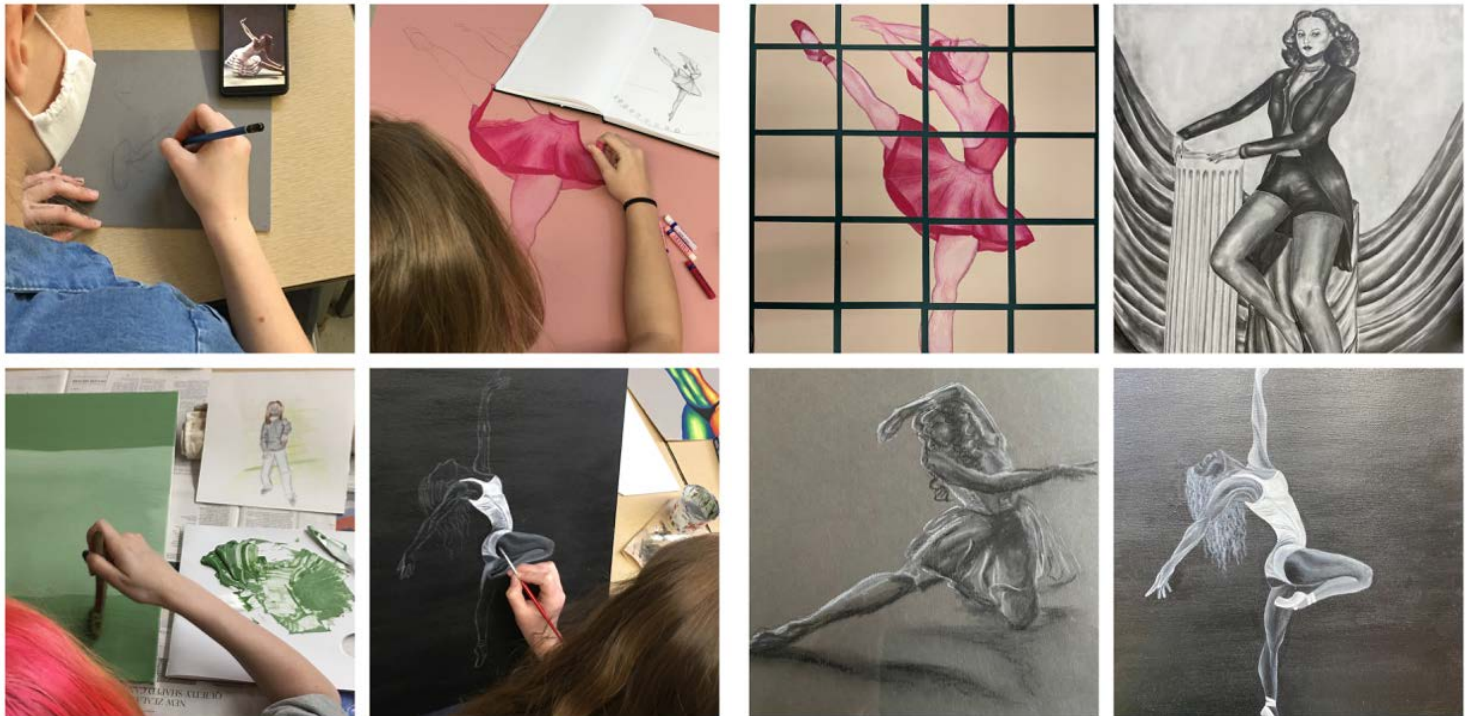

This week Vikings wrapped-up their genetics unit by applying what they learned in class to solve real-life problems. First, students solved a paternity mystery by testing blood samples, and applying the principles of inheritance to blood types. Then, students examined how a detrimental trait such as sickle cell anemia can persist in a population if there is selective pressure for it. Our Vikings modelled this persistence by using beans to represent chromosomes, and a coin toss to represent the possibility of contracting malaria. Students learned that an understanding of genetics certainly helps explain the world around us!

## VISUAL ARTS

Our Grade 11 Vikings have been very busy this month! After wrapping-up a figure study unit, they took on the challenge of a textured mural and then moved into a landscape unit. After hard work and determination, our Viking artists have produced some wonderful work. Check it out below and look forward to enjoying some new artworks in and around the school!

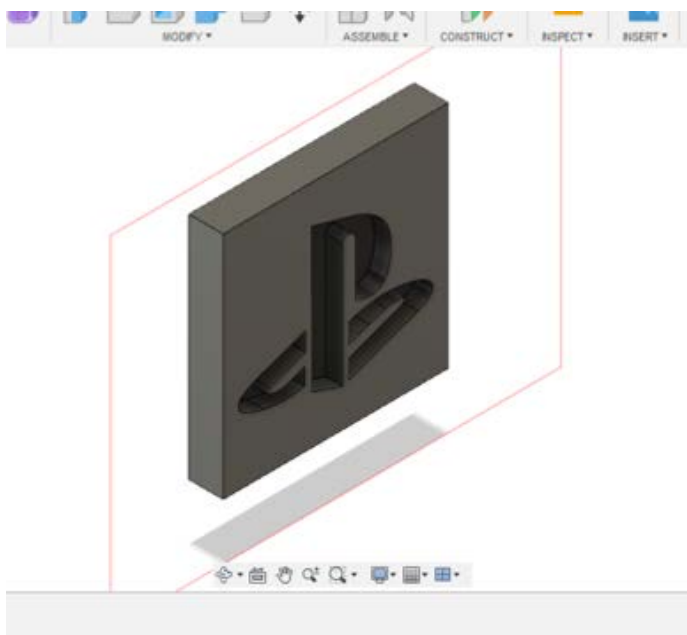

## NEW CNC/CAM TECHNOLOGY

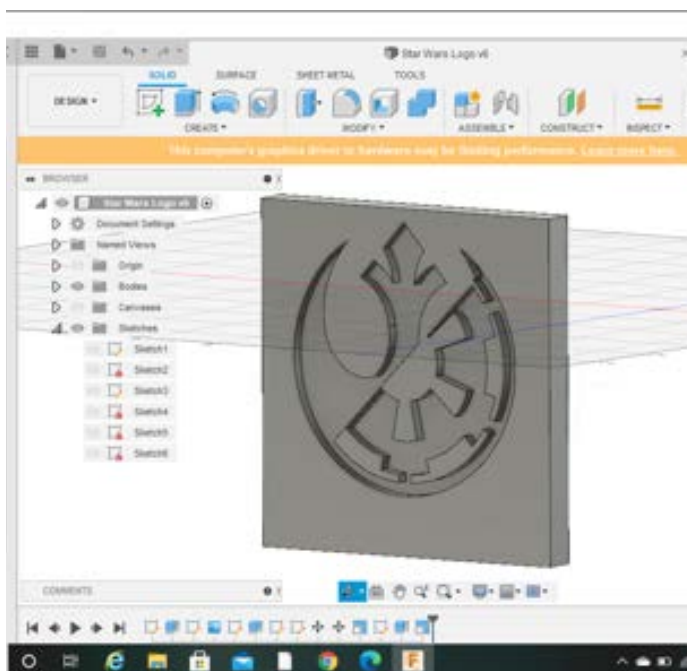

Lockerby has some new woodworking technology to incorporate into woodworking projects! Now our Vikings are able to create a design in Fusion 360 and have the software create 16,000 lines of computer code to have a machine accurately mill-out their design! Below are some of the first projects created with this technology where our Vikings transferred a graphic of their choice/design into a 3D computer model! See a video of the machine in action at: <https://www.youtube.com/watch?v=BHBXonBBwdU&>

We are just learning to use this technology, so who knows what will be created next!?
